<sup>®</sup> 衛生署衛生防護中心自2022年6月7日起只會公布於「2019冠狀病毒快速抗原測試陽性結果人士申報系統」呈報並經核酸檢測核實結果為陽性的個案。這些個案包括過去數日呈報的快速測試陽性個案。

From 7 June 2022 onwards, the Centre for Health Protection of the Department of Health only announce cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" which had been verified with positive nucleic acid test results. These cases include rapid antigen test positive cases reported in the past few days.

<sup>§</sup> 年齡介乎六個月至三歲的幼兒由2022年8月4日開始可於香港接種2019冠狀病毒病疫苗。Toddlers aged from six months to three years may receive the COVID-19 vaccine in Hong Kong starting from 4 August 2022.

Starting from 20 April 2022, the Hospital Authority has adopted a new counting method. Patient is considered as recovered, after 28 days from the date tested positive for COVID-19.

^ 就本統計分析而言，由2022年9月15日起，統計數字只包括曾在香港已接種至少一劑疫苗的人口（該些人士可能同時在香港以外地方接種其他劑次）。於分析該些人士已接種疫苗劑數時，已考慮在香港以外地方的疫苗接種記錄。比較9月14日發佈的數字，減少約20萬以反映以上技術性修訂。年齡是根據接種第一劑疫苗的日期計算。For the purpose of this statistical analysis, starting from 15 September 2022, the statistics cover population ever vaccinated in HK (the individuals may also have doses taken outside HK). Vaccine dose(s) taken outside HK by these individuals have been taken into account in the analysis of the number of doses taken. As compared to the statistics reported on 14 September, the aforementioned technical refinements result in a reduction of 200,000 persons. Age is calculated based on the date of first vaccine dose.

@ 2019冠狀病毒病疫苗接種計劃下的合資格接種人士，除了香港居民外，還包括以下類別的非香港居民：（1）持「往來港澳通行證」（慣稱「雙程證」）獲准逗留香港，並且無需延期也可以在逗留期限屆滿前完成接種兩劑疫苗的訪客；（2）免遣返申請人及獲聯合國難民署確認為難民的人士；及（3）在香港逗留的其他訪客（必須持有有效旅遊證件在香港合法逗留，並且無需延期而可以在逗留期限屆滿前完成接種兩劑疫苗）。這些合資格接種的非香港居民或未有包含在合資格接種人口基數內。此外，有關的人口基數非實時數字，與實際情況或會有偏差，故此接種百分比有可能高於100%。Apart from Hong Kong residents, eligible persons under the COVID-19 Vaccination Programme also include the following categories of non-Hong Kong residents: (1) holders of the Exit-entry Permit for Travelling to and from Hong Kong and Macao who can complete two doses of vaccination within their limit of stay without extension; (2) non-refoulement claimants and refugees recognised by the Office of the United Nations High Commissioner for Refugees; and (3) other visitors staying in Hong Kong (holders of valid travel documents who are allowed to stay in Hong Kong as permitted by the law, and can complete two doses of vaccination within their limit of stay without extension). These non-Hong Kong residents who are eligible to receive vaccination may not be included in the baseline population eligible to receive vaccination. Separately, the relevant baseline population is not based on real time figures and there may be deviations from the actual situation. Therefore, vaccination rate may be higher than 100%.

§ 年齡介乎六個月至三歲的幼兒由2022年8月4日開始可於香港接種2019冠狀病毒病疫苗。Toddlers aged from six months to three years may receive the COVID-19 vaccine in Hong Kong starting from 4 August 2022.

長者及兒童的疫苗接種率偏低。

The vaccination rate among elderly and children is relatively low.

在香港接種第一/二/三/四針的人口比率（以年齡組別劃分）

Rate of 1st/2nd/3rd/4th vaccine dose taken in Hong Kong per population by age group

人口比率

Per population rate

§ 年齡介乎六個月至三歲的幼兒由2022年8月4日開始可於香港接種2019冠狀病毒疫苗。比率是根據年齡介乎六個月至少於三歲的人口，估算為104,000。

Toddlers aged from six months to three years may receive the COVID-19 vaccine in Hong Kong starting from 4 August 2022. The rate is calculated based on population aged 6 months to less than 3 years, estimated as 104,000.

比率有可能超過100%，因已接種疫苗人士可包括非居港人士（已在前表列舉）。

The rate may exceed 100% as the vaccinated population also includes Hong Kong non-residents (specified in the preceding table).

與香港整體人口比較，已接種三針的人士佔目前為危殆/嚴重住院個案的比例較低，在死亡個案中的佔比更是極低。這似乎反映接種三針能有效防重症及死亡。

As compared to the Hong Kong overall population, those that have received 3 doses account for a lower proportion among currently hospitalised cases with critical/serious condition, and an extremely low proportion among deceased cases. This seems to suggest effectiveness of 3 doses in preventing serious illness and fatality.

### 比較死亡、住院及呈報個案，與居港人口的疫苗接種情況# 【臨時數字】

Comparison on vaccination status# of deceased, hospitalised and reported cases against resident population [Provisional figures]

# 計算是根據個別個案的呈報日期，相對於疫苗接種日期之時間間隔。但年底人口數字，則根據編製統計數字之日期。這額外對計算疫苗劑數的方法是由2022年4月7日開始應用，包括追溯所有過往數據。

It is counted based on the date of case reporting of each reported case with respect to the date of vaccination to arrive at the time interval. But for the resident population's figures, it is based on the date of statistics compilation instead. This additional counting method for 'no. of vaccine doses received' is implemented starting from 7 April 2022, including all retrospective data.

\* 沒有接種疫苗的人口中，包括已接種一劑但未滿14天的人士。The unvaccinated population include those that have received 1 dose but not yet reached 14 days.

^ 就本統計分析而言，由2022年9月15日起，統計數字只包括曾在香港已接種至少一劑疫苗的人口（該些人士可能同時在香港以外地方接種其他劑次）。於分析該些人士已接種疫苗劑數時，已考慮在香港以外地方的疫苗接種記錄。比較9月14日發佈的數字，減少約20萬以反映以上技術性修訂。年齡是根據接種第一劑疫苗的日期計算。沒有接種疫苗的估算人口是按各年齡組別的2021年年底人口（臨時數字）和該年齡組別曾經接種疫苗人口的差額相加所得（只計算差額為正數值的年齡組別）。For the purpose of this statistical analysis, starting from 15 September 2022, the statistics cover population ever vaccinated in HK (the individuals may also have doses taken outside HK). Vaccine dose(s) taken outside HK by these individuals have been taken into account in the analysis of the number of doses taken. As compared to the statistics reported on 14 September, the aforementioned technical refinements result in a reduction of 200,000 persons. Age is calculated based on the date of first vaccine dose. Estimated unvaccinated population is derived by summing up the difference between the end-2021 resident population (provisional figure) and the population ever vaccinated across age groups only if the respective difference is a positive value.

以上個別小組加起來不等於100%，因為“待定”個案沒有顯示。The above sub-groups do not add up to 100% because the cases with 'pending' information are not presented.
